#### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

#### Status

## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1 and 4 are rejected under 35 U.S.C. 102(b) as being anticipated by Kuroiwa (6,082,964).

Kuriowa discloses a sealing device having a floating ring 110 in a gap between a stator 48 and rotor 40. As seen in the figures, the dimensions of the ring meet the thickness and width limitations (appears to be larger than 3). The ring has a notch 138.

3. Claims 1 and 5-7 are rejected under 35 U.S.C. 102(b) as being anticipated by Gaffal (5,518,256).

Gaffal discloses a sealing device having a floating ring 4 in a gap between a stator 2 and rotor 1. As seen in Figure 6, the length (in an axial direction) is greater than 3 times the thickness (in a radial direction). The seal has concavoconvex patterns 24 on its surface. Figure 3 shows varied diameters of the ring and gap. And the rotor has a sealing member 3.

### ***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 3673

5. Claims 2 and 3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kuroiwa.

While it appears the seal ring is made of a plastic, Kuroiwa does not appear to disclose the material. The selection of a known material based on its suitability for its intended use is not considered inventive. See *In re Leshin*, 125 USPQ 416 (CCPA 1960). Therefore, it would have been obvious for one of ordinary skill in the art at the time the invention was made to make the ring of fluorine resin.

***Conclusion***

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
